5 Ways Restrict or Disable Mouse Right Click on the Desktop and in Programs

[g+](#) [HAL9000](#) [Updated 2 years ago](#) [Windows](#) [19](#) [Comments](#)

We all know what the right click context menu is in Windows and how it works. At it's best, the menu can be a hugely valuable resource to get certain tasks accomplished more quickly than digging through programs and their settings to do the same thing. But what if this menu is getting in your way for some reason and you want to disable it?

Perhaps you or your children are playing games in a browser and keep accidentally right clicking when you don't want to, or you just don't want somebody inexperienced to have access to the quick options of renaming or deleting something on the desktop in case they delete something they shouldn't. Disabling the right click of the mouse might sound like a simple thing, but you can't just press a button in Windows to turn it off without a piece of 3rd party software or going deeper into the system settings.
